D.W. SHAW (*Semiconductors, Epitaxy, Devices*)
M. UWAHA (*Growth Kinetics*)
A. ZANGWILL (*Theory (Epitaxy)*)

Scope of the journal
Experimental and theoretical contributions are invited in the following fields: Theory of nucleation and growth, molecular kinetics and transport phenomena, crystallization in viscous media such as polymers and glasses. Crystal growth of metals, minerals, semiconductors, magnetics, inorganic, organic and biological substances in bulk or as thin films. Apparatus, instrumentation and techniques for crystal growth, and purification methods. Characterization of single crystals by physical and chemical methods.

Abstracted/indexed in
Aluminium Industry Abstracts; Chemical Abstracts; Current Contents: Physical, Chemical and Earth Sciences; EI Compendex Plus; Engineered Materials Abstracts; Engineering Index; INSPEC; Metals Abstracts.

Publication information
Journal of Crystal Growth (ISSN 0022-0248). For 2000, volumes 208–220 are scheduled for publication. Subscription prices are available upon request from the Publisher or from the Regional Sales Office nearest you or from this journal's website (http://www.elsevier.nl/locate/jcrysgro). Further information on this journal and other Elsevier Science products is available through Elsevier's website (http://www.elsevier.nl). Subscriptions are accepted on a prepaid basis only and are entered on a calendar year basis. Issues are sent by standard mail (surface within Europe, air delivery outside Europe). Priority rates are available upon request. Claims for missing issues should be made within six months of the date of dispatch.

Orders, claims, and product enquiries
Please contact the Customer Support Department at the Regional Sales Office nearest you:

New York: Elsevier Science, P.O. Box 945, New York, NY 10159-0945, USA; tel.: +1 212 633 3730 [toll free number for North American customers: 1-888-4ES-INFO (437-4636)]; fax: +1 212 633 3680; e-mail: usinfo-f@elsevier.com.
Amsterdam: Elsevier Science, P.O. Box 211, 1000 AE Amsterdam, The Netherlands; tel.: +31 20 485 3757; fax: +31 20 485 3432; e-mail: nlinfo-f@elsevier.nl.
Tokyo: Elsevier Science, 9-15 Higashi-Azabu 1-chome, Minato-ku, Tokyo 106-0044, Japan; tel.: +81 3 5561 5033; fax: +81 3 5561 5047; e-mail: info@elsevier.co.jp.
Singapore: Elsevier Science, No. 1 Temasek Avenue, #17-1 Millenia Tower, Singapore 039192; tel.: +65 434 3727; fax: +65 337 2230; e-mail: asiainfo@elsevier.com.sg.
Rio de Janeiro: Elsevier Science, Rua Sete de Setembro 111/16 Andar, 20050-002 Centro, Rio de Janeiro – RJ, Brazil; tel.: +55 21 509 5340; fax: +55 21 507 1991; e-mail: elsevier@campus.com.br. [Note: (Latin America): for orders, claims and help desk information, please contact the Regional Sales Office in New York as listed above.]

Advertising information
Advertising orders and enquiries can be sent to:
USA, Canada and South America: Mr. Tino de Carlo, The Advertising Department, Elsevier Science Inc., 655 Avenue of the Americas, New York, NY 10010-5107, USA; tel.: +1 212 633 3815; fax: +1 212 633 3820; e-mail: t.decarlo@elsevier.com.
Japan: The Advertising Department, Elsevier Science K.K., 9-15 Higashi-Azabu 1-chome, Minato-ku, Tokyo 106-0044, Japan; tel.: +81 3 5561 5033; fax: +81 3 5561 5047.
Europe and ROW: Rachel Leveson-Gower, The Advertising Department, Elsevier Science Ltd., The Boulevard, Langford Lane, Kidlington, Oxford OX5 1GB, UK; tel.: +44 1865 843565; fax: +44 1865 843976; e-mail: r.leveson-gower@elsevier.co.uk.

USA mailing notice: Journal of Crystal Growth (ISSN 0022-0248) is published semimonthly by Elsevier Science B.V. (P.O. Box 211, 1000 AE Amsterdam, The Netherlands). Annual subscription price in the USA is US$ 8111 (valid in North, Central and South America only), including air speed delivery. Periodicals postage raid paid at Jamaica, NY 11431, USA.
USA postmasters: Send address changes to Journal of Crystal Growth, Publications Expediting, Inc., 200 Meacham Avenue, Elmont, NY 11003, USA.
Airfreight and mailing in the USA by Publications Expediting, Inc., 200 Meacham Avenue, Elmont, NY 11003, USA.

The paper used in this publication meets the requirements of ANSI/NISO Z39.48-1992 (Permanence of Paper)

This journal and the individual contributions contained in it are protected under copyright by Elsevier Science B.V., and the following terms and conditions apply to their use:

Photocopying
Single photocopies of single articles may be made for personal use as allowed by national copyright laws. Permission of the Publisher and payment of a fee is required for all other photocopying, including multiple or systematic copying, copying for advertising or promotional purposes, resale, and all forms of document delivery. Special rates are available for educational institutions that wish to make photocopies for non-profit educational classroom use.
Permissions may be sought directly from Elsevier Science Global Rights Department, P.O. Box 800, Oxford OX5 1DX, UK; tel.: +44 1865 843830, fax: +44 1865 853333, e-mail: permissions@elsevier.co.uk. You may also contact Global Rights directly through Elsevier's home page (http://www.elsevier.nl), by selecting 'Obtaining Permissions'.
In the USA, users may clear permissions and make payments through the Copyright Clearing Center, Inc., 222 Rosewood Drive, Danvers, MA 01923, USA; tel.: +1 978 7508400, fax: +1 978 7504744, and in the UK through the Copyright Licensing Agency Rapid Clearance Service (CLARCS), 90 Tottenham Court Road, London W1P 0LP, UK; tel.: +44 20 7631 5555, fax: +44 20 7631 5500. Other countries may have a local reprographic rights agency for payments.

Derivative works
Subscribers may reproduce tables of contents or prepare lists of articles including abstracts for internal circulation within their institutions. Permission of the Publisher is required for resale or distribution outside the institution.
Permission of the Publisher is required for all other derivative works, including compilations and translations.

Electronic storage or usage
Permission of the Publisher is required to store or use electronically any material contained in this journal, including any article or part of an article.
Except as outlined above, no part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without prior written permission of the Publisher.
Address permissions requests to: Elsevier Science Global Rights Department, at the mail, fax and e-mail addresses noted above.

Notice
No responsibility is assumed by the Publisher for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions or ideas contained in the material herein. Because of rapid advances in the medical sciences, in particular, independent verification of diagnoses and drug dosages should be made. Although all advertising material is expected to conform to ethical (medical) standards, inclusion in this publication does not constitute a guarantee or endorsement of the quality of such product or of the claims made of it by its manufacturer.

The paper used in this publication meets the requirements of ANSI/NISO Z39.48-1992 (Permanence of Paper)

JOURNAL OF CRYSTAL GROWTH

www.elsevier.nl/locate/jcrysgro

Subject index to volumes 211–220

Apparatus
- for bulk growth using ceramic springs **211** (2000) 421
- for coating aerosol **219** (2000) 290
- for controlled vapor diffusion **219** (2000) 283
- for gallium arsenide growth **211** (2000) 157
- for growth without crucible contact **211** (2000) 434
- for industrial crystallization **213** (2000) 116
- for large scale liquid phase epitaxy of aluminum gallium arsenide **211** (2000) 411
- for material feeding to Czochralski growth of silicon **211** (2000) 372
- for plasma assisted molecular beam epitaxy **214/215** (2000) 81
- for silicon nano particles **220** (2000) 466
- for the growth of shaped gallium antimonide crystals **220** (2000) 1
- for the growth of silicon carbide **220** (2000) 308
- – for X-ray imaging **216** (2000) 263

Cellular growth
- of aluminum lithium alloys **218** (2000) 419
- of diamond **218** (2000) 455

Computer simulation; Monte Carlo method
- of convection flows in melts **211** (2000) 34
- of gallium arsenide growth **211** (2000) 202
- of heat and mass transfer **211** (2000) 333
- of heat transfer and thermoelastic stress **211** (2000) 325, 352, 365
- of influence of thermal gradients on convection patterns **211** (2000) 446
- of pulsed laser deposition **211** (2000) 98
- of silicon growth **211** (2000) 13

Computer simulation
- of ab initio calculation **214/215** (2000) 552
- of annealed gallium arsenide **220** (2000) 6
- of aluminum gallium arsenide heteroepitaxy **212** (2000) 128
- of binding energy **220** (2000) 254
- of Bridgman growth **212** (2000) 340
- of dendritic growth **213** (2000) 161
- of dislocation density **216** (2000) 6
- of dislocation growth **219** (2000) 165
- of floating zone silicon growth **216** (2000) 204
- of fluid dynamics **212** (2000) 311
- of heat transfer **216** (2000) 389
- of macromolecular crystal growth **220** (2000) 130
- of melt growth **219** (2000) 205, 218
- of multiply twinned particles **213** (2000) 129
- of nickel iron copper multilayers growth **212** (2000) 291
- of solidification **212** (2000) 574
- of spoke pattern **216** (2000) 372
- of sublimation **220** (2000) 243
- of supersaturation **212** (2000) 480
- of surface decomposition mechanism **216** (2000) 87
- of turbulent flow in chemical vapor deposition **212** (2000) 299
- of vacancies **214/215** (2000) 452
- of vertical zone melting growth **213** (2000) 395

Constitutional supercooling, of
- para tellurite **211** (2000) 276

Constitutional supercooling
- of floating zone silicon **216** (2000) 204
- of indium gallium antimonide **220** (2000) 39

Convection **211** (2000) 1, 34, 149, 169, 276, 318, 352, 446; **212** (2000) 211, 324, 334, 584; **213** (2000) 161, 395; **216** (2000) 192, 204, 359, 372, 501; **217** (2000) 170, 201; **218** (2000) 74, 132, 419, 434; **219** (2000) 123, 144, 465; **220** (2000) 75, 166, 316, 326, 619

Dendritic growth **211** (2000) 43

Dendritic growth
- of alloys **216** (2000) 512
- of clathrate hydrate **218** (2000) 372
- of cupric chloride **219** (2000) 423
- of gibbsite **219** (2000) 451
- of lanthanum copper oxide **212** (2000) 142
- of polymers **216** (2000) 538
- of superalloys **219** (2000) 489

Device characterization
- diodes **213** (2000) 241; **214/215** (2000) 511, 520, 581, 1071, 1075, 1080, 1091, 1106, 1116, 1125, 1134, 1138; **218** (2000) 1
- electronic materials **211** (2000) 82; **212** (2000) 119; **214/215** (2000) 275, 436, 465, 516, 847, 866, 899, 913, 939, 993, 1152; **216** (2000) 97, 304; **217** (2000) 228, 263, 345; **220** (2000) 75, 82, 351, 405
- electro-luminescent materials **214/215** (2000) 928, 931, 935, 944, 950
- heterojunctions **213** (2000) 33, 241; **214/215** (2000) 330, 345, 420, 511, 576, 1111; **216** (2000) 51, 141; **217** (2000) 26, 33; **218** (2000) 13; **220** (2000) 16, 46, 220, 457, 538

– – of calcium oxalate calculi **212** (2000) 233
– – of cesium germanium chloride **212** (2000) 605
– – of gallium arsenide **220** (2000) 351
– – of hen-egg-white lysozyme **217** (2000) 161
– – of L-arginine phosphate monohydrate **220** (2000) 291
– – of lanthanum tungstate **216** (2000) 363
– – of ligand stabilized silver nanoparticles **212** (2000) 222
– – of L-tyrosine-doped triglycine sulphate **211** (2000) 220
– – of magnesium ammonium phosphate **213** (2000) 381
– – of nickel sulphate hexahydrate **213** (2000) 99
– – of 4-nitro-4-methyl benzylidene aniline **212** (2000) 246
– – of organic indole-3-aldehyde **212** (2000) 227
– – of potassium dihydrogen phosphate **217** (2000) 404
– – of potassium pentaborate **218** (2000) 323
– – of protein crystals **217** (2000) 429
– – of sodium borate **212** (2000) 507
– – of sodium hexafluorosilicate **216** (2000) 407
– – of taltirelin polymorphs **212** (2000) 239
– – of tin selenide **217** (2000) 157
– – of zinc selenide **219** (2000) 346
– by sol–gel method
– – of potassium lithium niobate **211** (2000) 82
– – of yttrium oxide **214/215** (2000) 926
– – of zinc sulphide **214/215** (2000) 926
– by templating
– – of calcium phosphates **211** (2000) 137
– by traveling heater method
– – of mercury zinc telluride **214/215** (2000) 255
– by polymorphic transformation
– – of beta-estradiol **217** (2000) 320
Stefan problem, or moving boundary problem **211** (2000) 18, 43, 333
– of monotectics **212** (2000) 324
– of Peltier interface demarcation **216** (2000) 483, 495
– of succinonitril **218** (2000) 115
Surface structure, of
– lanthanum strontium manganette **211** (2000) 86
– phthalocynine **211** (2000) 308
Surface structure
– of aluminum gallium arsenide antimonide
– of ametrine **212** (2000) 255
– of ammonium chloride **212** (2000) 512
– of barium titanate **212** (2000) 173
– of 1,4-bis(5-phenyloxazol-2-yl)benzene **220** (2000) 88
– of cadmium iodide crystals **213** (2000) 70
– of macromolecular crystal growth **220** (2000) 130
– of multiply twinned particles **213** (2000) 129
– of potassium dihydrogen phosphate **213** (2000) 340, 355
– of potassium bicromate **216** (2000) 413
– of protein crystals **212** (2000) 270
– of silicon carbide **217** (2000) 115
– of strontium titanate **212** (2000) 173
– of sucrose crystals **219** (2000) 67
– of tantalum oxide **212** (2000) 459
Surface morphology
– of gallium nitride **217** (2000) 349
Superlattices, multilayers
– of barium titanate **212** (2000) 173
– of germanium silicon **213** (2000) 308
– of II–VI compounds **214/215** (2000) 167, 172, 405, 460, 610, 616, 625, 630, 634, 639, 646, 665, 676, 727, 819, 823, 862, 1035, 1130

- of III–V compounds **216** (2000) 527
- of silicon germanium **216** (2000) 171
- of strontium titanate **212** (2000) 173
Superconductivity materials, high T_c
- bulk
- - of incommensurate cuprates **211** (2000) 501
- - of lanthanum copper oxide **212** (2000) 142
- - of lanthanum strontium copper oxide **212** (2000) 138
- - $REBa_2Cu_3O_{7-\delta}$ **213** (2000) 312
- - $Tb_{0.4}Y_{0.6}Ni_2B_2C$ **213** (2000) 319
- - of YBCO **218** (2000) 45; **219** (2000) 228
- - of PrBCO **219** (2000) 385
- - of BSCCO **220** (2000) 68
Surface energy, determination
- of vaterite **218** (2000) 359; **219** (2000) 277
- of sucrose crystals **219** (2000) 67
- of high polar energy surface **220** (2000) 180
- of calcium phosphate **212** (2000) 261
- of zinc oxide **214/215** (2000) 299

Thin film growth, epitaxy
- by atomic layer epitaxy
- - of gallium arsenide **212** (2000) 402; **213** (2000) 221; **220** (2000) 351
- - of hafnium dioxide **220** (2000) 105
- - of strontium sulphide **216** (2000) 245
- - of tantalum oxide **212** (2000) 459
- - of titanium dioxide **220** (2000) 531
- - of zinc selenide **212** (2000) 97
- - of zinc sulphide selenide **216** (2000) 152
- by chemical solution decomposition **217** (2000) 388
- by chemical vapor deposition
- - of diamond **211** (2000) 211, 216
- - of silicon carbide **211** (2000) 343
- by metalorganic chemical vapor deposition
- - of aluminum gallium nitride **211** (2000) 78
- - of aluminum nitride **211** (2000) 78
- - of indium arsenide antimonide **211** (2000) 400
- - of indium arsenide antimonide phosphide **211** (2000) 189
- - of indium gallium arsenide antimonide **211** (2000) 189
- - of indium phosphide antimonide **211** (2000) 400
- by molecular beam epitaxy
- - of aluminum gallium arsenide **212** (2000) 128; **213** (2000) 214; **217** (2000) 355
- - of aluminum arsenide **213** (2000) 214; **219** (2000) 335
- - of aluminum gallium indium phosphide **217** (2000) 345
- - of aluminum nitride **216** (2000) 15; **218** (2000) 173
- - of aluminum gallium nitride **220** (2000) 432
- - of aluminum gallium indium nitride **220** (2000) 341
- - of aluminum antimonide **220** (2000) 384
- - of barium titanate **212** (2000) 173
- - of beryllium cadmium selenide **214/215** (2000) 109
- - of beryllium telluride **214/215** (2000) 316, 330, 345, 487, 1071
- - of beryllium zinc magnesium selenide **214/215** (2000) 340
- - of beryllium zinc selenide **214/215** (2000) 95
- - of beryllium zinc telluride **214/215** (2000) 321
- - of bismuth strontium calcium cuprate **220** (2000) 68
- - of cadmium magnesium telluride **214/215** (2000) 240, 1002
- - of cadmium manganese telluride **214/215** (2000) 140, 178, 400, 797, 801, 1002
- - of cadmium selenide **214/215** (2000) 656, 671, 684, 690, 703, 707, 727, 747, 752, 756, 770, 774, 778, 806
- - of cadmium sulphide **214/215** (2000) 660, 680
- - of cadmium telluride **214/215** (2000) 1, 240, 520, 694, 742, 1002
- - of cadmium zinc telluride **214/215** (2000) 983
- - of chromium **218** (2000) 197
- - of gallium antimonide **220** (2000) 384
- - of gallium arsenide **211** (2000) 389, 405, 416; **212** (2000) 35, 373; **213** (2000) 193, 214; **216** (2000) 1; **217** (2000) 26, 355; **218** (2000) 209; **219** (2000) 335; **220** (2000) 23, 355
- - of gallium indium phosphide **212** (2000) 49
- - of gallium nitride **212** (2000) 391; **213** (2000) 33; **216** (2000) 15, 44; **218** (2000) 1, 143, 155, 191; **219** (2000) 327
- - of gallium nitride arsenide **217** (2000) 26
- - of gallium selenide **217** (2000) 371; **219** (2000) 199
- - of gallium nitride **220** (2000) 204, 341, 379, 432
- - of germanium **216** (2000) 159

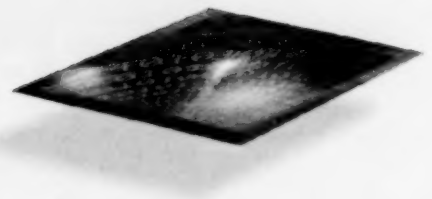
Choose from broad collections of primary journal literature and powerful secondary databases, all deliverable via the Internet or your local Intranet—building blocks for the digital library you need.



SCIENCE DIRECT®

For the Digital Library You Want

ScienceDirect offers desktop access to over 1 million articles published in nearly 1,200 journals spanning 16 fields of science and provides researchers with some 2 million bibliographic citations and abstracts. Access may also be provided to an additional 30 million abstracts via ScienceDirect's secondary databases.

Unprecedented content, navigability and customization options
Whether you choose the breadth of the ScienceDirect multi-publisher platform or one of our discipline or industry-focused solutions, you'll be providing your institution with a dynamic, efficient and integrated solution to access the world's critical STM literature.

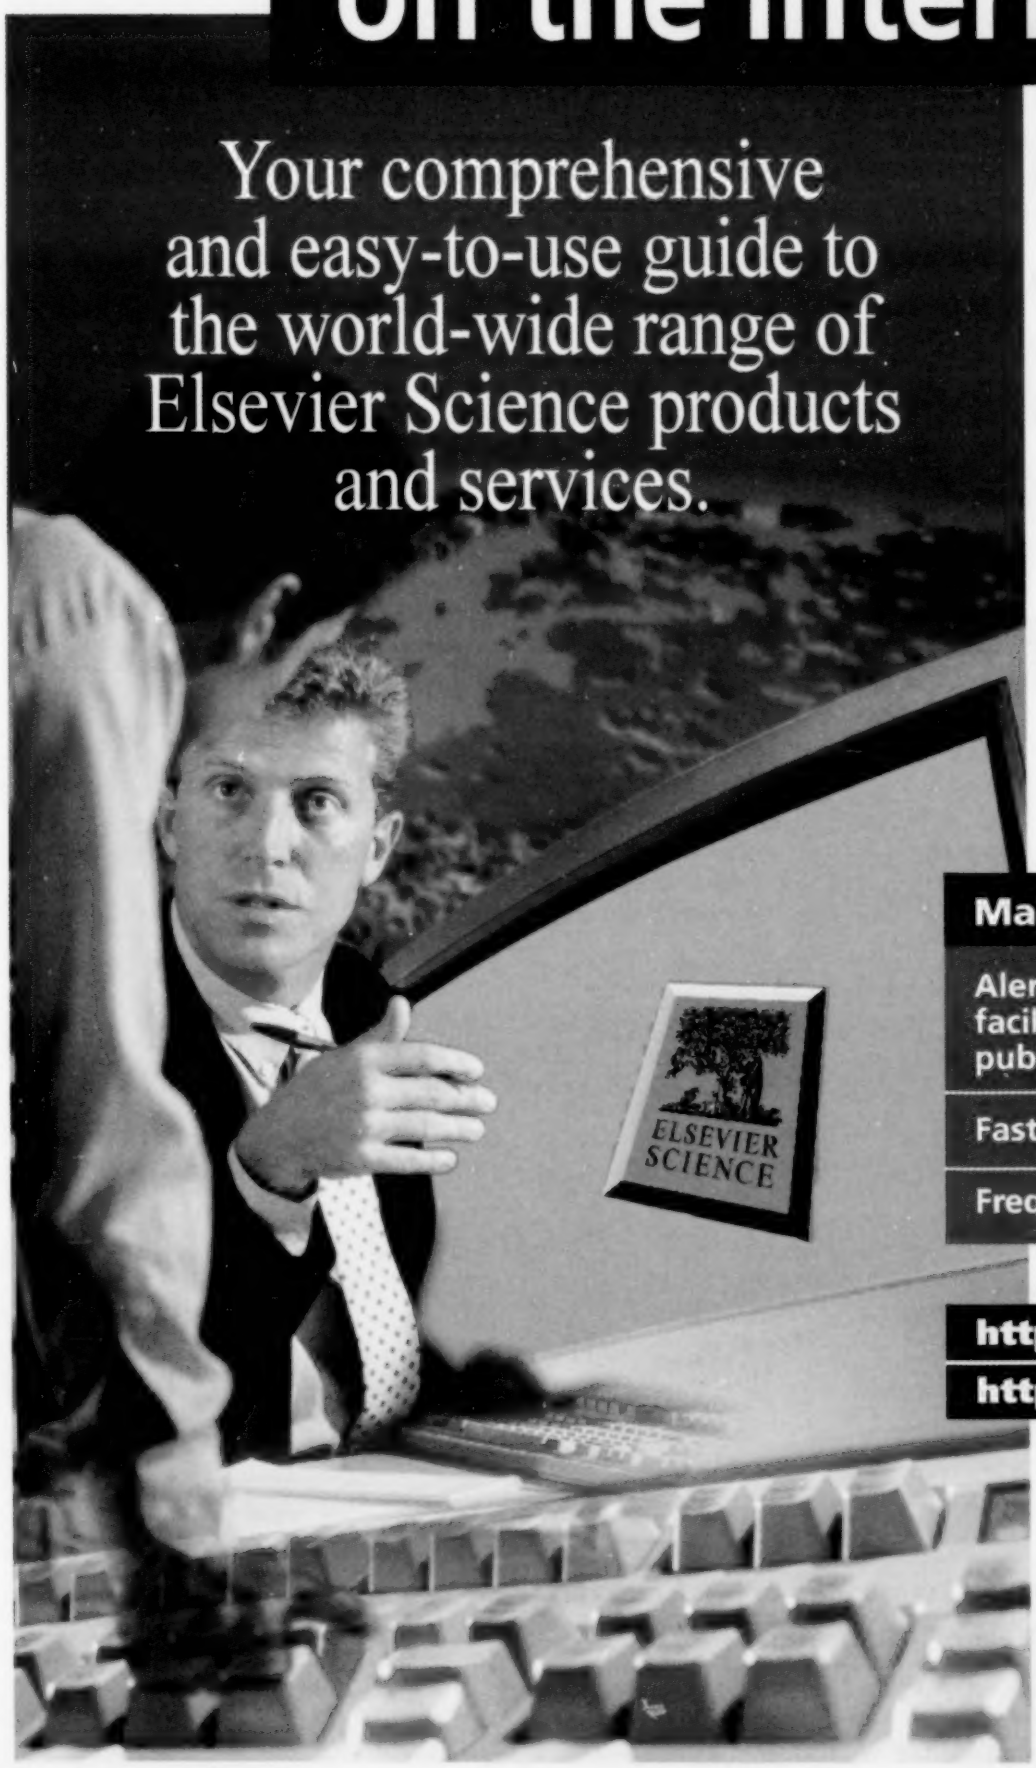
Elsevier Science on the Internet



Your comprehensive and easy-to-use guide to the world-wide range of Elsevier Science products and services.
ELSEVIER SCIENCE

Visit Elsevier Science on the Internet and access a unique repository of information covering the entire scientific spectrum. Our time-saving search facilities will lead you to our frequent updates in seconds.

Main features include:

- Alerting and awareness facilities for new and forthcoming publications.
- Fast, time-saving search facilities.
- Frequent updates.

Journal of Crystal Growth

Instructions to Authors (short version)

Submission of papers
Manuscripts (one original + two copies) should be sent to a member of the Editorial Board or preferably to an appropriate subject Associate Editor. For addresses, see preliminary pages of each issue. Priority communications should be sent to L.F. Schneemeyer. News or announcements should be submitted through the Principal Editor; a duplicate should be sent directly to Elsevier Science B.V., address given below.
Original material. Submission of a manuscript implies it is not being simultaneously considered for publication elsewhere and that the authors have obtained the necessary authority for publication.

Types of contributions
Original research papers and Priority communications are welcome. They should contain an Abstract (of up to 200 words) and a Conclusions section, which particularly in the case of theoretical papers translates the results into terms readily accessible to most readers.
As a guideline: *experimental papers* should not be longer than 16 double-spaced typed pages, and 8 figures + tables; for *theoretical papers* a maximum of 20 pages and 10 figures + tables is suggested.
Priority communications should not be longer than 5 double-spaced typed pages, and 3 figures + tables. They will be given priority in both the refereeing and production processes. The faster production schedule may preclude sending proofs of Priority communications to authors.

Manuscript preparation
All manuscripts should be written in good English. The paper copies of the text should be prepared with double line spacing and wide margins, on numbered sheets.
Structure. Please adhere to the following order of presentation: Article title, Author(s), Affiliation(s), Abstract, PACS codes and keywords, Main text, Acknowledgements, Appendices, References, Figure captions, Tables.
Corresponding author. The name, complete postal address, telephone and fax numbers and the e-mail address of the corresponding author should be given on the first page of the manuscript.
Classification codes/keywords. Please supply one to four classification codes (PACS and/or MSC) and up to six keywords of your own choice that describe the content of your article in more detail.
References. References to other work should be consecutively numbered in the text using square brackets and listed by number in the Reference list. Please refer to the more detailed instructions for examples.

Illustrations
Illustrations should also be submitted in triplicate: one master set and two sets of copies. The *line drawings* in the master set should be original laser printer or plotter output or drawn in black india ink, with careful lettering, large enough (3–5 mm) to remain legible after reduction for printing. The *photographs* should be originals, with somewhat more contrast than is required in the printed version. They should be unmounted unless part of a composite figure. Any scale markers should be inserted on the photograph itself, not drawn below it.
Colour plates. Figures may be published in colour, if this is judged essential by the Editor. The Publisher and the author will each bear part of the extra costs involved. Further information is available from the Publisher.

After acceptance
Important. When page proofs of the accepted manuscripts are made and sent out to authors, this is in order to check that no undetected errors have arisen in the typesetting (or file conversion) process. At the proof stage only printer's errors may be corrected. No changes in, or additions to, the edited manuscript will be accepted.
Notification. The authors will receive the final answer of acceptance or rejection from the Editorial Board or Associate Editor and will be invited to supply an electronic version of the accepted text, if this is not already available.
Copyright transfer. In the course of the production process you will be asked to transfer the copyright of the article to the Publisher. This transfer will ensure the widest possible dissemination of information.

Electronic manuscripts
The Publisher welcomes the receipt of an electronic version of your accepted manuscript. If there is not already a copy of this (on diskette) with the journal editor at the time the manuscript is being refereed, you will be asked to send a file with the text of the accepted manuscript directly to the Publisher by e-mail or on diskette (allowed formats 3.5″ or 5.25″ MS-DOS, or 3.5″ Macintosh) to the address given below. (When e-mailing a non-ASCII word-processor file, you should encode it, e.g. with UUENCODE or BinHex, so as to retain all formatting codes.) The name and version of the word-processing program and the type of operating system should always be indicated. Please note that no deviations from the version accepted by the Editor of the journal are permissible without the prior and explicit approval by the Editor. Such changes should be clearly indicated on an accompanying printout of the file.

Author benefits
No page charges. Publishing in Journal of Crystal Growth is free.
Free offprints. The corresponding author will receive 25 offprints free of charge. An offprint order form will be supplied by the Publisher for ordering any additional paid offprints.
Discount. Contributors to Elsevier Science journals are entitled to a 30% discount on all Elsevier Science books.
